

AngularJS in 60 minutes

Minu Palaniappan

What's AngularJS

- Front-end Javascript Framework
- Modal-View-Controller system
- Incredibly powerful for single-page apps

Why Angular

- incredible functionality (mimics complex web structures)
- Data-binding, routing, object-oriented
- Lightweight

Demo

Angular at Hackathons

- Angular fire is simple to set up
- At hackathons, time & communication are your best friends
- Angular is scaleable to hand thousands of users (when used with a BaS)

Pro-tips for hacking

- Functionality & looks
- Distribute your work (find teammates that are really damn good at one specific thing)
- Use Git **and not dropbox**
- Consolidate, not expand (have a short & powerful feature list)
